Treasury Department,
Office of the Supervising Architect,

Washington, D. C., October 20, 1892.

Mr. Oliver C. Bosbyshell,
Superintendent,
U. S. Mint,
Philadelphia, Pa.

Sir:-

Referring to conversations had with you during my stay in Philadelphia, relating to the plans for the building for the new U. S. Mint, I have to say that the condition of the work in this Office renders it impossible to send a suitable person to Philadelphia to make the preliminary drawings; the main difficulty being not with regard to payment for the service, but because we have only one or two men who could render acceptable service in that matter, and they cannot be spared from the general business of the Office.

I think, however, we can take the matter up satisfactorily if you will have prepared a simple diagram of each floor, showing what, in your judgment, will be a convenient division of the floor space and arrangement of offices and of the working departments of the Mint. If we have the relative areas of the different rooms,

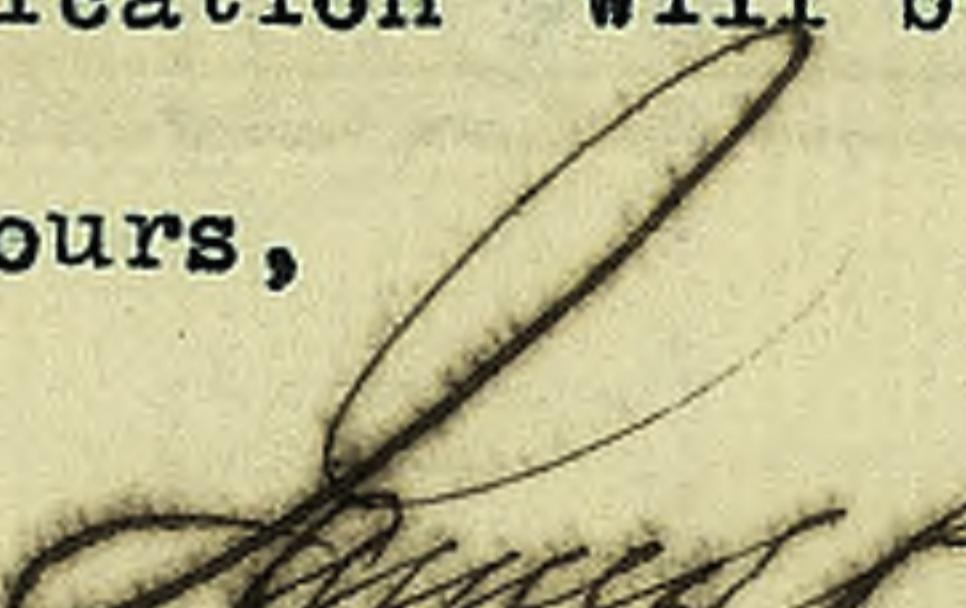

RG104 E-1 Box 178

Supt., U. S. Mint, Philadelphia, Pa., October 20, 1892. - 2.

and some knowledge of their proper relations to each other, we can in the Office make working plans which can be submitted to you for further consideration and discussion. The diagram for each floor should be for an area of not more than 40,000 square feet; say a parallelogram of 250 feet by 160 feet. Make the diagrams for four floors; a cellar, an entrance story, with floor two or three feet above the street, a main story, and a third, or attic, story; which will give you about 160,000 square feet available. I will repeat that these may be simple diagrams, not finished drawings. If they show the area desired for each office or working space, and a convenient relation of those spaces, the preliminary plans can be worked out here and put in shape for conference and further study.

An early reply to this communication will be appreciated.

Respectfully yours,

James F. Lee,
Acting Supervising Architect.

W. H. G.
